

Working
together on
healthy pigs!

OPTICARE[®] WEAN AUTOMIX

The number of live-born piglets per sow continues to increase. The need for supplementary feeding in the farrowing crate is becoming essential. The Automix system is a feeding solution, especially developed to supplement piglets via cup systems in the farrowing crate.

Pig farmers who work with an (automatic) cup or trough system may from a few days post-farrowing to weaning their piglets can utilize a single feeding system. In this way, optimal and efficient use of the investment without having to compromise on the quality of feeding and piglet performance.

The Wean Automix is a high-quality supplementary feed that is highly soluble. It consists largely from vegetable derived raw materials, Putting Swinco's concept: 'Learning to eat and digest.' into action

Available as either bagged or in bulk

The Opticare Range is available as bagged and bulk. Bulk delivery provides even more labour saving, reducing handling of weight and allows better regulation of the feeding programme. Utilizing a silo placed on the installation, the feed is automatically made fresh in on demand throughout the day.

This keeps it palatable and of highest quality. The product has been extensively tested and runs faultlessly through the pipes to the cup. It also increases feed intake and promotes piglet performance. Opticare Range in combination with the Automix cup system is very suitable for high-performing pig farms working with prolific litters.

To acclimatise piglets to solid feed and encourage chewing, we recommend a large pellet such as our BabyBigXL or the BigXplore as an additional supplementary feed.

Advantages Wean Automix

- Feeding with one system, from milk to point of wean feed;
- Minimizing handling requirements and time savings by feeding via automated system;
- The product is Palatable and maximizes feed intake;
- Available as bagged and bulk; the latter reduces handling and minimizing errors.
