

Working
together on
healthy pigs!

OPTICARE[®] WEANING

Opticare Weaning is a feed program especially developed for the piglet in the weaner pen weighing about 6 to 9 kilograms. Uniquely we use specially selected raw materials ensuring a smooth weaning process and optimal growth of the piglet. Our piglet feed manufacturer exclusively uses refined raw materials.

Opticare Regular Crumb LFS

A palatable, well-soluble and homogeneous product, well suited for liquid feeding systems.

Opticare Healty Weaning

Supports piglet health. Suitable for weaners with normal health status and good feed intake.

Opticare Wean & Grow

Ensures optimal intake and continuous higher growth rates in the piglet. Stimulates feed intake and prevents weaners losing condition. Suitable for weaners with minimal disease challenge.

Opticare Wean & Grow Hipro

Besides the strong properties of Opticare Wean & Grow, the composition of Hipro is focused on the fulfilling piglet's genetic potential.

Characteristics:

- Highly digestible weaning feed;
- Contains high-quality raw materials;
- Soluble, stable, and homogeneous complete feed when mixed with water;
- Palatable for young piglets to promote feed intake;
- Supports and maintains intestinal health.

Characteristics:

- Optimal feed composition. No pressure on the digestive system, reduced risk of post-weaning diarrhea;
- Unique composition of different fiber sources. Promotes the development of healthy intestinal flora;
- Oregano extract + organic acid mix. Reduces the development of E. Coli and Clostridium.

Characteristics:

- Ideal combination of easily digestible ingredients and high-quality raw materials. Prevents nutrients wastage and stimulates growth;
- Excellent palatability properties;
- For the Hipro variant, the nutrients are formulated with a focus on maximizing genetic potential..

Opticare[®] is a product of Swinco International BV

OPTICARE[®]

Tips for use

Mixing Opticare Weaning with prestarter feed is viable from 5 days post weaning, for a smooth transition. The feed can be provided from 7 days before weaning. Make sure the piglets have sufficient feed intake for a smooth transition to the first piglet feed. Do not switch to the first rearing feed until the piglets eat at least 300 grams per piglet per day. Transition Opticare Weaning with the first piglet rearing feed over at least 2 or 3 days.

Main ingrediënts

	Ontsloten granen	Gezondheidscontrole met organische zuren mix	Oregano-extract	Speciale vezelmix	Zalmolie

Decorticated grains

- Improved palatability;
- Easiest digestible source of carbohydrates raw materials;
- Beneficial effect on stomach function.

Health control with organic acid blend

- Antibacterial properties;
- Lowers pH of the stomach content, aiding in the activation of enzymes.

Oregano-extract

- Reduces growth of E.Coli and Clostridium;
- Improves feed conversion

Special fibre mix

- Promotes beneficial microflora development and supports intestinal health.

Salmon oil

- Contains omega 3 fatty acids: anti-inflammatory effect and stimulates the immune system.
